Topical Rosacea Agents

Description

Finacea (azelaic acid), Mirvaso (brimonidine), Noritate (metronidazole), Rhofade (oxymetazoline), Soolantra (ivermectin)

Background

Finacea (azelaic acid), Mirvaso (brimonidine), Noritate (metronidazole), Rhofade (oxymetazoline) and Soolantra (ivermectin) are used for the topical treatment of rosacea. Rosacea is a chronic relapsing inflammatory skin disorder which mostly affects the central face. Persistent facial redness is cited as the most common sign of rosacea and may resemble a flushing or sunburn that does not go away. Mirvaso and Rhofade are alpha adrenergic agonists that can reduce facial redness through direct cutaneous vasoconstriction. The mechanisms by which Finacea, Noritate and Soolantra act in reducing inflammatory lesions of rosacea are unknown (1-6).

Regulatory Status

FDA-approved indications: (1-5)

- Finacea is indicated for the topical treatment of inflammatory papules and pustules of mild to moderate rosacea.
- Mirvaso is indicated for the topical treatment of persistent (non-transient) facial erythema of rosacea in adults.
- Noritate is indicated for the topical treatment of inflammatory lesions and erythema of rosacea.
- Rhofade is indicated for the topical treatment of persistent facial erythema associated with rosacea in adults.

- Soolantra is indicated for the topical treatment of inflammatory lesions of rosacea.

Safety and effectiveness of the topical rosacea agents in pediatric patients under 18 years of age has not been established (1-5).

Related policies

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Topical rosacea agents may be considered **medically necessary** if the conditions indicated below are met.

Topical rosacea agents may be considered **investigational** for all other indications.

Prior-Approval Requirements

Age 18 years of age or older

Diagnosis

Patient must have the following:

Rosacea

AND ALL of the following:

1. Completion of a baseline rosacea assessment
2. Patients with inflammatory lesions (e.g., papules, pustules) must have an inadequate treatment response, intolerance, or contraindication to **ONE** of the following:
 - a. Doxycycline
 - b. Topical generic metronidazole
3. Prescribed by a dermatologist or patient will be referred to a dermatologist
4. **NO** dual therapy with another PA topical rosacea agent (see Appendix 1)

Prior – Approval *Renewal* Requirements

Age 18 years of age or older

Diagnosis

Patient must have the following:

Rosacea

AND ALL of the following:

1. Re-evaluation of rosacea for improvement
2. **NO** dual therapy with another PA topical rosacea agent (see Appendix 1)

Policy Guidelines

Pre - PA Allowance

None

Prior - Approval Limits

Quantity 180 units per 90 days

Duration 6 months

Prior – Approval *Renewal* Limits

Quantity 180 units per 90 days

Duration 12 months

Rationale

Summary

Finacea (azelaic acid), Mirvaso (brimonidine), Noritate (metronidazole), Rhofade (oxymetazoline) and Soolantra (ivermectin) are used for the topical treatment of rosacea. Rosacea is a chronic relapsing inflammatory skin disorder which mostly affects the central face. Persistent facial redness is cited as the most common sign of rosacea and may resemble a flushing or sunburn that does not go away. Mirvaso and Rhofade are alpha adrenergic agonists that can reduce facial redness through direct cutaneous vasoconstriction.
